SKILLS

Front-End Development:
HTML, CSS, JavaScript, React.js

Backend Development:
SQL (PostgreSQL), REST API, Node.js

Version Control:
Git, GitHub

Additional Skills:
Testing/Playwright, API integration, MUI
React component library

EMPLOYMENT

Self Employed Contractor (UBER, Bolt and Green Destinations)

Private Hire Driver

Oct 2021 – Present

- Customer focus
- Problem-solving
- Working independently

Jaguar Land Rover

Production Operative/ Quality Operative

Jan 2012 – Mar 2021

Production Operative

- Exceeded production quotas
- Maintained assembly accuracy
- Efficient component assembly
- Collaborated for smooth flow
- Resolved line issues

Quality Operative

- Inspected manufactured parts
- Ensured quality standards
- Implemented corrective actions
- Followed QC procedures

PROFILE

As a self-motivated Software Developer, my journey into the tech world has been driven by a passion for creating innovative solutions. Coming from a background where problem-solving was paramount, I found that software development provided the perfect avenue to not only provide solutions but also to create them from scratch. My proficiency in ReactJS, JavaScript, HTML, and CSS has been honed through personal projects, such as building an anime browsing website to showcase popular and upcoming shows. This transition into tech has been fuelled by the desire to leverage technology as a tool for problem-solving and innovation. My portfolio page, crafted with HTML, CSS, JavaScript, ReactJS, and NextJS, reflects my dedication to learning and contributing to fast-paced development teams. I am eager to continue growing and making impactful contributions in this dynamic field.

EXPERIENCE

School Of Code

Software Development Bootcamp   **Feb 2024– May 2024**

School Of Code is an intensive 16 week Software Development bootcamp. During my immersive coding experience, I covered a broad range of subjects essential for a software engineer. I mastered front-end and back-end engineering, delved into database management, and learned quality assurance processes to ensure project reliability. Advanced web development skills allowed me to create user-friendly interfaces, while product management training enabled me to strategize from conception to delivery. Collaborating with diverse peers, I tackled real-world challenges, enhancing my problem-solving abilities. The supportive environment, led by industry experts, fostered networking and facilitated my growth as a versatile software professional.

Frontend Simplified - Online

Virtual Internship: Software Development   **Jul 2022 - Nov 2022**

During the virtual internship, I mastered key front-end technologies including HTML, CSS, JavaScript and React. I developed proficiency in creating dynamic and visually appealing web applications through hands-on coding exercises and projects. As part of the program, I built a professional e-portfolio to showcase my skills and achievements, designed to attract the attention of top tech companies. This experience provided me with practical knowledge in structuring and designing web applications, with a strong focus on usability and aesthetic appeal. I also learned industry best practices for web development and how to effectively present my work to potential employers.

PROJECTS

School Of Code Final Project
(https://github.com/aaqeebh1/bc16-final-projects-team-ctrl-alt-elite)
Our team was tasked by the Director of Communications of the West Midlands Combined Authority to create a detailed and high-level view of scheduled activities across departments. Our solution was made using ReactJS with Vite for its superior performance, offering faster builds and hot module replacement, and for its ease of use, providing a streamlined development experience with modern tooling. Using an agile workflow, we managed version control with GitHub, employed Husky and Snyk for automated tasks and security, and tracked progress via Trello's ticketing system. This tool enhances strategic decision-making and resource management.
My responsibilities for the task were:
- Implemented and customised month view library (react-big-calendar).
- Implemented wrapper (title, logo, view switcher, department key and event key) for the dashboard.
- Creating filtering system for the Yearly and Quarterly views using department key.
- Added hover card and click card on month view with dynamic data.

AnimeWorld (https://github.com/aaqeebh1/anime-website)
HTML, CSS, JavaScript, ReactJS and RESTAPI
In this project I made a responsive Anime search website. I used JikanAPI to pull data and populate the results, I also used React Router, React Hooks and added a loading state.
